

Do you agree or disagree that progress is always good?

The main idea of progress is perfection. A man who is making progress in studying, a child who is speaking his/her first words, a scientist who has made a discovery, or an economy of some country is making progress, all of them are aspects of huge human progress. There is no doubt that progress is good for the humanity as a whole but whether it is good for the world.

For example, being anxious for success mankind often forgets about the environment. Every country has numerous factories with smoke rising from them. Needless to say, the amount of cars is increasing every day. World economy is making progress in creating different types of machines, vehicles that make easier our conditions of life. As a result we have many devices that make our life easier and at the same time we have acid rains, polluted lakes and rivers, our food does not have as many important vitamins as it used to, but it has nitrates, preservatives and unnatural components and ingredients.

As a result of human progress, now humanity has to deal with the problem of overpopulation.

It is my opinion that now it is time for humanity to think more about the making progress in solving the problems of air pollution, overpopulation and water contamination.
